- Intermediate

PROFILE SUMMARY

Passionate and detail-oriented Full-Stack Developer with expertise in both MERN stack (MongoDB, Express.js, React.js, Node.js) and SQL database systems. Experienced in building end-to-end web applications using JavaScript, Next.js, and implementing real-time features with Socket.IO. Skilled in database management through SQL Workbench and MongoDB Atlas. Currently advancing knowledge through formal education while developing practical solutions like e-commerce platforms and event booking applications. Committed to writing clean, scalable code and delivering user-centered experiences in collaborative environments.

WORK EXPERIENCE

🛒 Shoe E-Commerce Platform

Full-Stack React/Node.js Application

- Developed end-to-end solution with React frontend, Express/Node.js backend
- Managed relational data using MySQL database
- Implemented secure payment processing with Stripe integration
- Utilized Cloudinary for efficient image storage and CDN delivery
- Built responsive dashboards with search, filtering, and pagination for users/admins

📅 Event Booking System

MERN Stack with Real-Time Functionality

- Created full-stack application using MongoDB, Express, React, and Node.js
- Implemented real-time admin approvals via Socket.IO notifications
- Managed complex state flows with React Context API
- Designed intuitive booking interface with optimized user workflows

🏢 Construction Company Website

Responsive React.js Business Platform

- Developed multi-page marketing site with mobile-responsive design
- Styled UI components using Tailwind CSS framework
- Built interactive project gallery for portfolio showcase
- Integrated company information sections and lead-generation contact forms
